The Xometry Customer Service Agreement ([www.xometry.com/service-agreement](http://www.xometry.com/service-agreement)), Manufacturing Standards ([www.xometry.com/manufacturing-standards](http://www.xometry.com/manufacturing-standards)), and website Terms of Use ([www.xometry.com/terms](http://www.xometry.com/terms)) are incorporated by reference into this Quote and any order which results from this Quote and shall exclusively apply, notwithstanding any conflicting or additional terms in your purchase order or any other communications with us.

### - PLEASE REVIEW THIS QUOTE FOR ACCURACY PRIOR TO ORDER -

We have priced and estimated a delivery window for your job based on the geometry in 3D model you have provided, along with the tolerances, features and secondary operations you have selected during the submission process and which are specifically confirmed by us in this Quote. We do not automatically extract features, tolerances or other non-geometric information from your submitted 3D model, even if represented there (e.g. threads, tapped holes, etc.). Even though our prices are dynamically generated in real time, we will honor the price in this Quote for thirty (30) days from generation (although the estimated delivery window will be re-calculated at time of actual order placement).

On-site Source Inspection requirements may add an additional charge and increase lead time.

While we may provide you with design for manufacturing assistance, you are ultimately responsible for the suitability of your design, and associated material selection, for any intended purpose. You may submit one or more engineered drawings and or specification sheets to us. While we will do our best to identify any inconsistencies or conflicts in your materials prior to manufacturing your part, you alone are responsible for any inconsistencies between the materials you provide to us and what is reflected in this Quote.
